# INSTALLING AND USING THE SDC TASKS
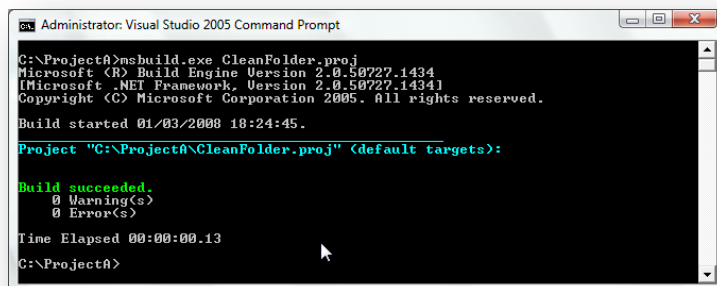

OPTION 1: PER PROJECT INSTANCE

1. Unzip the contents of the binaries download to a bin subfolder in your project, e.g.

2. Import the tasks in your project File
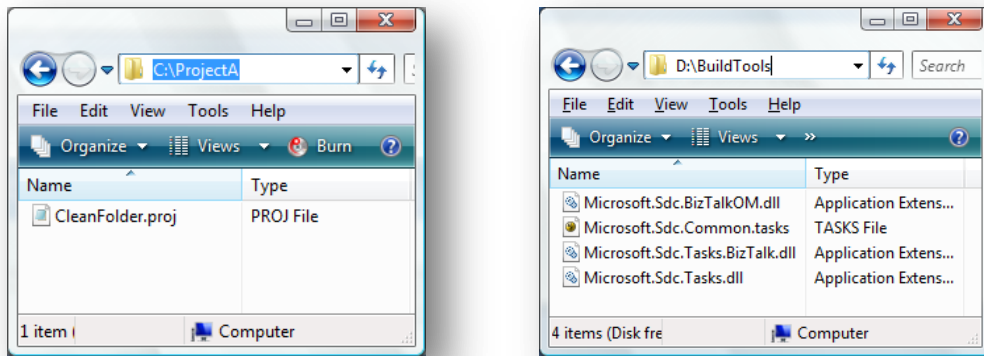

```xml
<Project DefaultTargets="Default" xmlns="http://schemas.microsoft.com/developer/msbuild/2003">
        <Import Project="bin\Microsoft.Sdc.Common.tasks"/>
        <Target Name="Default">
                <CleanFolder Path="c:\MyCleanFolder" Force="True"/>
        </Target>
</Project>
```
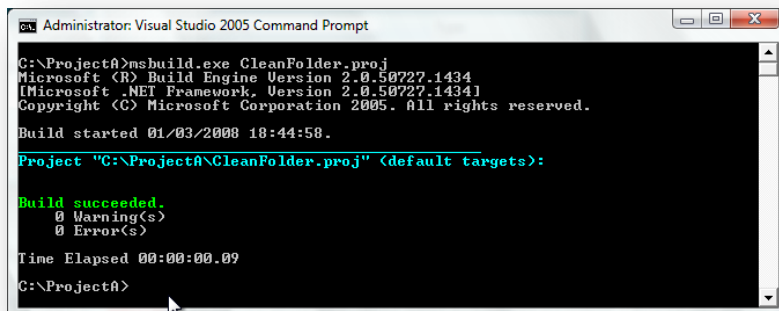

3. Execute the Task

1. Unzip the contents of the binaries download to a common folder, e.g. **D:\BuildTools**

2. Import the Tasks in your project file and set the TasksPath

```xml
<Project DefaultTargets="Default" xmlns="http://schemas.microsoft.com/developer/msbuild/2003">
    <PropertyGroup>
        <TasksPath>D:\BuildTools</TasksPath>
    </PropertyGroup>
    <Import Project="$(TasksPath)\Microsoft.Sdc.Common.tasks"/>
    <Target Name="Default">
        <CleanFolder Path="c:\MyCleanFolder" Force="True"/>
    </Target>
</Project>
```

3. Execute the Task

OPTION 3: YOUR WAY…

Because the SDC Tasks are a standard MSBuild library, you may alter the *Microsoft.Sdc.Common.tasks* file or create your own to suite your own needs.
